

NEW — ORGANIC LEATHER

METAL-FREE **ORGANIC** TANNING,
BIODEGRADABLE COWHIDE

The retannage is done with tannins, the leather is vacuum dried and finished with waxes and anilines.

The leather conveys uniqueness of character, the round and compact structure lends to highlighting the refinement of a silky hand, enhanced by a transparent look with soft pull-up effect.

Being an aniline leather, some little colour variations between different hides are acceptable. Keep away from light and heat sources.
